NEPHROLEPIS SMITHII

NEPHROLEPIS TEDDY, JR.

“TEDDY JUNIOR”

A Grand New Dwarf Fern

“Teddy Junior,” the fern for every household. It is a sport from the now famous Roosevelt Fern and, while its habit of growth is to produce a shorter frond, it retains all the valuable characteristics of the parent plant. The fronds are broad and beautifully tapered from base to tip; they droop just enough to make a shapely, graceful plant, permitting it to finish with a full center and perfectly symmetrical spread. The pinnae are distinctly undulated, giving the fronds an attractive, wavy appearance, which adds materially to their charming decorative effect, and thin, scraggy foliage is never seen in this variety.

“Teddy” will produce about four times more fronds than any other fern ever introduced, finishing with fifty to sixty fronds in a 4-inch pot, while twelve to fifteen is the average number other varieties will produce in the same size pot. It is such a compact, vigorous grower that it will thrive under most adverse conditions, making an exceptionally rapid growth and producing a plant of rare beauty and perfection in the average dwelling house without special care or attention.

Owing to its habit of producing a great quantity of massive foliage in small pots, this fern makes the finest pedestal plant ever produced, and will prove indispensable for decorating dining-room or library tables and numerous other places in the home where limited space will not permit using large pots or varieties with longer fronds.

As a table decoration, fern growers can appreciate the commercial value of a dwarf variety that will produce forty to fifty fronds 12 inches to 15 inches long in a 4-inch pot. Such plants could readily be disposed of, and every grower can produce them from

“Teddy Junior” with as little care and expense as they can grow other varieties.

NEPHROLEPIS JOHN WANAMAKER

“The Wanamaker Boston Fern”

A “sport” from *Nephrolepis Scholzelii*, with longer, narrower, gracefully drooping fronds. It is not so compact in growth as *Scholzelii*, and therefore does not decay in the center, and is a durable house fern. It is a rapid grower, making an abundance of fronds, and is quite distinct from any other *Nephrolepis*.
